DETAILED ACTION

Drawings

1. The drawings were received on 23 September 2003. These drawings are acceptable.

Claim Objections

2. Claims 35 and 37 are objected to because of the following informalities: In claim 35, lines 11-12 and claim 37, lines 13-14, "the plate" should be --the web guide plate--. Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 36 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 36, it is not clear what structure is set forth by "the further centering of the web depends on contour features of individual punches...".

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3724

6. Claims 29-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Arends et al. (US 4,173,161) in view of Wittek (US 1,796,417).

Arends discloses the invention substantially as claimed except for a web conveyor having a drive motor, a drive wheel, and a follower wheel, and a knock lever mechanism having a knock lever arm and a kinematic linkage having a center pivot. Instead, Arends employs feed fingers mounted on a vertically moving block to engage and disengage from the workpiece. However, Wittek discloses a web conveyor having a drive motor (11), a drive wheel (22), and a follower wheel (21), a knock lever mechanism having a lever arm (end portion of 43) and a kinematic linkage (43) having a center pivot (43A) wherein the lever arm is carried at one end of the kinematic linkage and the drive wheel (22) is carried at an opposite end of the kinematic linkage (via 22B) for intermittently feeding the workpiece at varying lengths. It would have been obvious to one having ordinary skill in the art at the time the invention was made to employ a web conveyor assembly and a knock lever mechanism as taught by Wittek on the device of Arends as an alternative structure for providing the stepwise advancing of the workpiece.

Allowable Subject Matter

7. Claims 35 and 37 are objected to because of the minor informalities set forth above, but would be allowable if rewritten to overcome the objections.

8. Claim 36 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Response to Arguments

9. Applicant's arguments with respect to claims 29-37 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

10. This action is made Non-Final.
